DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. **Claims 1-5 and 8-11** are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunt (4,323,186) in view of King et al. (4,337,886).

Hunt teaches a method of manufacturing a welding filler metal (col. 1. lines 40-43), comprising the steps of: casting (col. 2, line 9) a nickel-base alloy (col. 4, lines 15-16) as an extrusion rod having a diameter from about 0.2 inch to about 0.5 inch (col. 5, line 48 and col. 2, line 25, Hunt specifically gives examples of .18 inch and 0.225 inch), the extrusion rod having grains in the cross section of the extrusion rod, and extruding the extrusion rod in a single extrusion operation (see figure and col. 5, lines 9-11) to a filler-metal diameter of less than about 0.1 inch (col. 2, line 66, Hunt specifically teaches a diameter of less than 0.07 inch) and using an areal extrusion ratio of at least about 9:1 (col. 7, lines 28-31) to form the welding filler metal.

Hunt teaches the invention cited above with the exception of having at least about 12 grains in the cross section of the extrusion rod.

King et al. teach at least about 12 grains **12,12a** in the cross section of an extrusion rod.

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to have provided the invention of Hunt with at least about 12 grains in the cross section of the extrusion rod, in light of the teachings of King et al., in order to increase the malleability of the rod (as suggested by King et al. at col. 1, lines 56-60).

With respect to Claims 3 and 11, Hunt/King et al. teach the invention cited above with the exception of using the claimed materials.

It would have been obvious to one of ordinary skill in the art, at the time of the invention, to have selected the claimed material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416. See also *Ballas Liquidating Co. v Allied industries of Kansas, Inc.* (DC Kans) 205 USPQ 331.

Allowable Subject Matter

3. **Claims 6, 7, 12, and 13** are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Contact Information

4. Telephone inquiries regarding the status of applications or other general questions, by persons entitled to the information, should be directed to the group clerical personnel. In as much as the official records and applications are located in the clerical section of the examining
